

Top discussion points

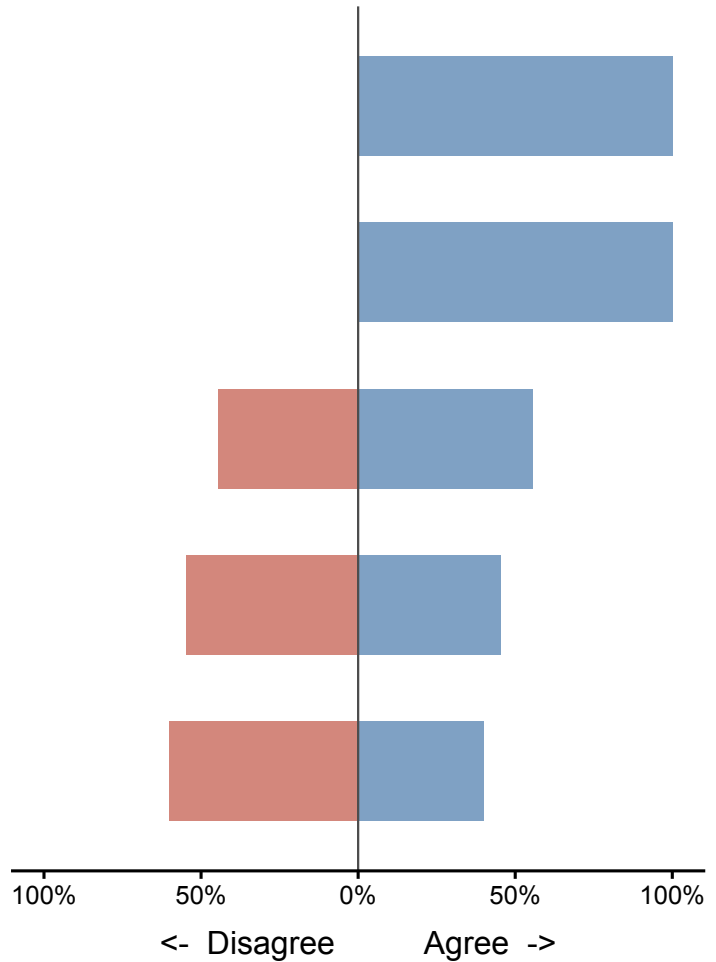

AI can do the first pass of screening or extraction, but a human still has to verify the output before it enters a review.

Students should have to do one literature review by hand before they are allowed to use AI for one.

Published literature reviews are becoming obsolete because you can use LLMs to generate a lit review for you at any time.

If an AI agent matches expert performance on literature search, insisting on human search is nostalgia rather than rigor.

Missing a few relevant studies is an acceptable price for the speed at which LLM's can screen abstracts.
